

Amendments to the Specification:

Please replace the Abstract of the Disclosure with the following amended abstract:

~~--The invention provides a surveillance camera which can record the operation history of a composite camera and remain important for repairing.~~

A storage means (47) formed of a rewritable non-volatile memory for recording the operation history of the surveillance camera is provided within the surveillance camera apparatus. An auto panning operation time, a power supply turn-on time, a temperature within the surveillance camera apparatus, the number of preset operations, the number of changing operations of the filter of the camera or the number of a coordinate system resetting operations is recorded, whereby important information at the time of repairing can be provided.--
